

Style

I made all the page reference the same style sheet so the whole website will look the same and visually look better.

Label

I added label attribute to the JavaScript programs when assigning variables for when the user clicks on the element within the label. It will create easier controls throughout the program.

Links

I added links to each page to easily navigate throughout the website

Language

I added the lang attribute to each page of the website to allows screen readers to read the content in an appropriate language. It also facilitates automatic transition of the content.

Colors

I changed the colors of the background and the text to increase the contrast between them so the words are easily seen.

Images

I added alt text to images for the visually impaired to still know what the picture is.
